Project Introduction

Parliamentarians' networking and advocacy efforts on population and development heightened following a resolution adopted at the International Forum of Parliamentarians (IFP) in The Hague in 1999, affirming that parliamentarians, as representatives of the people, have a pivotal role to play in addressing population issues, acting as mediators and promoting approaches that are fostered by people's understanding. There was also unanimous agreement to create a worldwide network of parliamentarians on population and development as a platform to exchange information, lessons learned and best practices, and advance the implementation of the Programme of Action (PoA) of the International Conference on Population and Development (ICPD).

Japan has been at the forefront of the parliamentarians' movement on population and development and has continued to take a leading role in encouraging such undertaking to take root in other parts of the world. Recognizing its importance, Japan created the Japan Trust Fund (JTF) in the United Nations Population Fund (UNFPA) which greatly contributed to advancing parliamentary networking and advocacy efforts on population and development issues.

Since its establishment in 1982, the Asian Population and Development Association (APDA) has been actively engaged in supporting parliamentarians' activities as the secretariat of two organizations, namely the Japan Parliamentarians Federation for Population (JPPF), the world's first non-partisan organization committed to population and development issues, and the Chair's Office of the Asian Forum of Parliamentarians on Population and Development (AFPPD), the world's first regional parliamentary forum on these issues.

APDA conducted the first *Asian and African Parliamentarians' Capacity Development on the Integration of Population Issues into National Development Frameworks* in Cambodia in 2013, building upon the success of APDA's JTF-funded projects from 2009 to 2011, which underlined the important role of parliamentarians in improving accountability, transparency and aid effectiveness in ODA processes. The first part of the project ("Part I") discussed and examined in depth the concrete roles and responsibilities of parliamentarians, through theoretical learning and practical field experience.

With the support of JTF, APDA held the second part of the project ("Part II") in 2014 in Uganda, its very first project in Africa. This was conducted in cooperation with the Uganda Parliamentarians Forum on Food Security, Population and Development (UPFFSP&D). It drew 38 parliamentarians and representatives of national committees on population and development from 15 countries from Asia, Africa and Europe and served the purpose of the JTF to foster parliamentarians' partnerships and networking to further collective efforts in addressing population and development challenges. The project also highlighted Japan's initiative and assistance in this field.

With the project having successfully come to an end, participants stressed that APDA's projects among Asian and African parliamentarians should continue, with parliamentarians from Zambia, Kenya and Ghana expressing great willingness and enthusiasm to organize this project in their own countries in the future.

Maternal and Child Health Reproductive Health and Capacity Building for Youth

Mulago Hospital

In 2010, the global maternal mortality rate was nearly halved from an estimated 543,000 in 1990 to 287,000. Still, every two minutes, a woman dies from complications related to pregnancy or childbirth. Sub-Saharan Africa (56%) and Southern Asia (29%) accounted for 85% of those tragedies. Most can be prevented if access to Reproductive Health (RH) services including family planning is improved, births are attended by skilled health workers, and emergency obstetric care is available.¹

Uganda has one of the fastest growing populations in the world, with a population growth rate of 3.0% and a Total Fertility Rate (TFR) of 6.38. Here at Mulago Hospital, more than 2000 babies are born every month, and 30,000 babies annually.

Maternal and child health services include family planning, immunization and post-natal care.

Mulago Hospital, with only 2000 beds, accommodates about 8000 patients, with bedless patients sleeping on the floor. The hospital faces pressing issues such as a shortage of doctors, skilled birth attendants and medical supplies.

Nile Vocational Institute

Currently, more than 1.8 billion people of the world's 7 billion population are young people aged between 10 and 24, most of whom live in developing countries. As an unprecedented number of young people are entering their reproductive age, their unmet need for RH services is likely to increase, bringing higher risks of unwanted pregnancies and new HIV and other sexually transmitted infections. It is imperative to ensure that they have access to RH services and maximize their potential in order to achieve sustainable development.

A wide range of vocational courses are offered at the Nile Vocational Institute to develop the capacity and skills of young people, including carpentry, plumbing, sheet-metal working, auto/motorcycle mechanic work, sewing, cooking, catering and nail-styling.

Hands-on training in a hairdressing course.

Students learn motorcycle repair skills on Japanese vehicles.

¹ Trends in Maternal Mortality: 1990 to 2010, WHO, UNICEF, UNFPA and The World Bank estimates, 2012.

A mother carries a maternal and child health handbook introduced from Japan.

The hospital took about 600 fistula patients in last year, but many more patients are still waiting to be treated: an amount far beyond the capacity of the 4 full-time surgeons that are currently stationed at the hospital. A campaign was launched calling for deliveries to take place at medical facilities which will help prevent childbirth-related complications for women including fistula.

Breastfeeding and vaccinations are encouraged in the notices posted on the walls of the maternity unit.

Naguru Teenage Centre

Young people come to the Naguru Teenage Centre to receive RH services and information.

Tablets are available to prevent iron and folate deficiency anemia in pregnancy.

Reproductive Health Uganda (RHU)

RHU, a Member Association (MA) of the International Planned Parenthood Federation (IPPF), has been a pioneer in promoting and providing RH services and advocacy in Uganda for more than 50 years.

Food Security Sustainable Development and Poverty Reduction Parliamentarians' Networking on Population and Development

NERICA Rice Promotion Project

At the current growth rate, Africa will not be able to sustain its population. The co-organizer of the project, the Uganda Parliamentarians Forum of Food Security, Population and Development (UPFFSP&D), recognizes the importance of food security, and exerts tremendous efforts to address this issue. This project reaffirmed that the stabilization of the population is an indispensable condition for achieving sustainable development and that the role of parliamentarians is essential in these efforts.

Mr. Tatsushi Tsuboi (Right), known as "Mr. Nerica", who is spearheading the promotion of the project and product.

Dr. Kunihiro Tokida (Left), Project Chief Advisor, explains the project to the participants at the Regional Rice Research and Training Center built with financial assistance from JICA.

This project, supported by the Japan International Cooperation Agency (JICA), contributes to improving production and productivity of NERICA (New Rice for Africa) rice, increasing farmers' incomes, and attaining rice self-sufficiency and food security.

Uganda Industrial Research Institute (UIRI)

While agriculture remains a leading sector in the country, the Government of Uganda is increasing its investment in creating employment and generating income to accelerate economic growth and eradicate poverty. Uganda has achieved Goal 1, Target 1A (Halve, between 1990 and 2015, the proportion of people living on less than \$1.25 a day) of the Millennium Development Goals (MDGs) that concerns the eradication of extreme poverty and hunger, before the 2015 deadline.

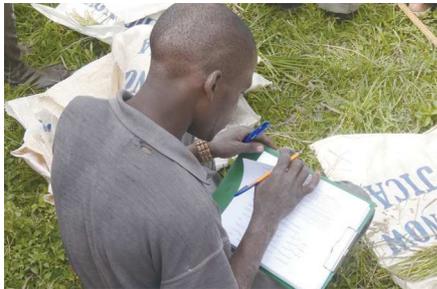

UIRI, the Ugandan government's lead agency for industrialization, provides training programmes in areas such as mechanics, electronics, engineering and ICT.

UIRI develops food processing technologies and promotes the production of high quality industrial and handmade products.

Textiles and craft products made at the Institute can be purchased.

With its long history and expertise in growing rice, Japan provides technical assistance to improve rice varieties and train and develop human resources.

Conversion to paddy field requires vast investment and labor, so upland rice varieties are grown extensively in Uganda.

Ms. Junko Sasaki, Director of UNFPA Tokyo Office, poses with two Japan Overseas Cooperation Volunteers (JOCVs). The JOCVs are graduates of Tokyo University of Agriculture who have come here to share their expertise with local farmers.

Nerica is a hybrid rice from a low-yielding African rice variety and a high-yielding Asian rice variety that not only will increase yield production, but will also be resistant to certain insects and pests, while being able to withstand the specific weather conditions in Africa.

Parliament of Uganda

Japan has taken a leading role in the parliamentarians' activities on population and development since the establishment of the Japan Parliamentarians Federation for Population (JPFP) in 1974. With its support, regional parliamentary fora on population and development were established for Asia, Latin America, the African & Arab region combined, as well as for Europe, paving the way for the establishment of a new separate forum for the African continent, namely the African Parliamentary Forum on Population and Development (APF).

Hon. Dr. Chris Baryomunsi, Chair of UPFFSP&D; President of APF (left).

The "Wash a Million Hands Campaign" is supported by SARAYA, a Japan-based international health and sanitation company, and UNICEF to reduce hygiene-related diseases, especially among children.

Session 4 Impact of IT Technology: Accountability, Transparency and Good Governance

Mr. Arindam Chakrabarty
 Project Manager of Airtel Uganda
 Uganda

Mr. Dennis A Kakonge
 Legal & Regulatory Director
 of Airtel Uganda
 Uganda

Chair:
 Hon. Kasamba Mathias
 Publicity Secretary of UPFFSP&D
 Uganda

Session 6 Discussion for the Adoption of the Draft Statement

Chair:
 Hon. Fredrick Outa
 Kenya

Various points of view were aired and debated to highlight the importance of parliamentarians' networking on population and development to address the issues facing Asian and African countries. The session resulted in the Statement, which was adopted unanimously by the participants.

Conference

Asian and African Parliamentarians' Capacity Development on the Integration of Population Issues into National Development Frameworks - Part II

13 February 2014

Uganda

Statement

We, parliamentarians as representatives of 15 Asian, African and European countries, gathered in Uganda do commit ourselves to strengthening efforts to address population issues and set out a course of action to prioritize population issues on the national agenda and maximize aid effectiveness through this APDA-UPFFSP&D Project towards the 20-year deadline of the ICPD Programme of Action of 2014 and beyond.

I. We reaffirm that:

- 1) Population programmes are the foundation of national development; without stabilizing the population, sustainable development will not be achieved.
- 2) Population programmes facilitate environments conducive to human rights and allow people to make responsible choices for future societies.
- 3) Population programmes including Sexual and Reproductive health are managed through well-informed choices aimed at improving well-being of individuals, especially of those who live in poverty.
- 4) Population programmes enhance the status and empowerment of women, which contribute to creating social and economic development and eradication of poverty.
- 5) Population programmes are among the most cost-effective interventions which pave way to sustainable development.

II. Based on these facts, we make the following policy recommendations:

- 1) We urge respective governments to mainstream population programmes in the Post-2015 Development Agenda that will be adopted in 2015.
- 2) We parliamentarians commit to lobby in our respective parliaments to review, formulate and popularize policies and laws that promote sexual and reproductive health and population programmes to achieve sustainable development.
- 3) We strive to achieve universal access to sexual and reproductive health through strengthening the framework of Universal Health Coverage.
- 4) We urge respective governments to integrate Universal Health Coverage schemes into national development policies and implementing international assistance programmes as a principal instrument for population and development programmes.
- 5) We request national and international institutions including aid organizations to provide persuasive, evidence-based, concise data to be utilized to formulate policies and programmes, advocate fellow parliamentarians, and create support from the constituents.
- 6) We call for effective cooperation in the field of ICT for achieving Good governance, Transparency and Accountability.
- 7) For achieving the balance between population and food security, we need to promote proper sexual and reproductive health measures through the universal health coverage and the proper measures to strengthen resiliency of food security such as NERICA (New Rice for Africa).
- 8) We work towards promoting cooperation and coordination as well as sharing good practices at the national, regional and international levels. For this purpose, promoting collaboration with the Regional Parliamentary Fora on Population and Development to participate in the preparation process of IPCI in Stockholm is paramount.

III. In closing:

- 1) In celebration of the success of the APDA-UPFFSP&D project, we express our thanks to the co-organizers, as well as to the Parliament of Uganda, the Government of Japan, UNFPA, IPPF and other partner organizations for supporting this project to prioritize population issues.
- 2) We acknowledge that Parliamentarians' roles, activities, and the platforms where they can work effectively are imperative in addressing population issues at the grassroots based on people's needs. Toward the ICPD 2014 and beyond, we commit ourselves to parliamentarians' activities to address population and development issues.
- 3) We implore international aid organizations' continued support and expansion of parliamentarians' activities such as this, considering the achievements that APDA has made to strengthen Asian and African parliamentarians' activities during the past more than 30 years.
